

prairie cinquefoil

Drymocallis arguta

FEATURES

Prairie cinquefoil is also known as tall cinquefoil. This perennial herb has brown, hairlike structures on the stem. Leaves are present on the stem and at the base of the plant. The stem leaves are arranged alternately. The pinnately compound leaves have seven to 11 oval, toothed leaflets that are hairy on the lower surface. The white or cream-colored flowers have five petals. The one-seeded fruit is dry and hard. Prairie cinquefoil may attain a height of one to three feet.

BEHAVIORS

TAXONOMY

Kingdom: Plantae
Division: Magnoliophyta
Class: Magnoliopsida
Order: Rosales
Family: Rosaceae

ILLINOIS STATUS

common, native

ILLINOIS RANGE

leaves and stems

Aquatic Habitats

none

Woodland Habitats

upland deciduous forests

Prairie and Edge Habitats

black soil prairie; gravel prairie; sand prairie
