

quillback

Carpionodes cyprinus

FEATURES

The quillback may attain a length of 12 to 17 inches. It has a deep body and a small, cone-shaped head. The upper jaw does not reach behind the front of the eye. The back is green or gray while the sides are silver. The paired fins are white or orange, and the remaining fins are gray. The breeding male has projections (tubercles) over most of his body and most of his fins. The quillback lives for about 10 years.

BEHAVIORS

The quillback may be found statewide in Illinois. This fish swims in schools. It spawns in spring and does go on spawning migrations. It eats larval insects, snails, clams and algae.
