RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Darlene Sisler

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Water is not a renewable resource! And we do not know any of the long-term effects of Fracking on our water supply because the Drillers will not disclose enough details about the chemicals they're using. Until the drillers disclose the ingredients in their "secret drilling sauce," you cannot - in good conscience allow Fracking in Illinois. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Fred Thomas Sr Sr

Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. In the haste to facilitate big business are we repeating the mistakes of the past? Fracking leaves enormous, and potentially deadly, amounts of waste fluid that must be stored or transported. Like the waste from nuclear plants, will it just pile up and become an accident waiting to happen? What about the impacts on our water supplies. It is simply naive to assume that some of these toxic substances will not find their way into the water supply. Is the potential contamination and enormous consumption of our limited water resources really worth the benefits to a small few? That said, we haven't even begun to understand the potential long term health impacts from the introduction of these chemicals in our environment.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Marlene Peaslee

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

After carefully considering the rules which you are proposing regarding fracking in Illinois, I feel that there are very serious loopholes, which will not protect the citizens and the environment of Illinois. I know that you have heard many excellent comments upon these loopholes from people at the public hearings which you are holding, and I commend you for doing so. My husband and I attended the one in Decatur, and I was very pleased to see the ;large turn out, especially at this extremely busy time of year. Being very aware of some of the terrible things which have occurred in other states where fracking has taken place, I am very uneasy about allowing this to be unleashed upon the people of Illinois! Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. The lose of tremendous amounts of water for this process is something which should be carefully considered, because with climate change causing higher temperatures, and drought in some areas (In Champaign this past summer we had two solid months of high temps and not one drop of moisture!). As climate change accelerates, water is going to be an ever more scares resource, which needs to be managed wisely. Using it for fracking does not seem to be in the best interest of the people of Illinois. The wasted water is unfit for any other use, and poses very serious problems for disposal of it- there is no way to do this without serious risk of contamination to our water supplies. We are going to need our precious water to survive . People can get by without a lot of things for a time, but WATER ISN" T ONE OF THEM! Be the heroes who stood up to the fossil fuel industry in defense of our environment and our people, and just say "NO!" Pleas do the right thing, and BAN FRACKING!! Thank you for consideration of my comments.

Sincerely,

Kyra E. Shair

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

David G

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

paula davis

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jonathan Shkiele

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Ryan Gavin

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

You must protect Illinoisans from fracking dangerously and without consideration for consequences unintended or otherwise. You must remove all loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, if no regulations can make fracking safe, then we do not need fracking or energy that presents dangers to public health and safety, inevitably pollutes water and air. If only a ban on fracking will truly protect Illinoisans, then stop the rush to frack Illinois.

Sincerely,

Carlos Vazquez

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Bill Wilson

Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. In addition, the state of Illinois LACKS BOTH THE FISCAL AND ADMINISTRATIVE CAPACITIES to adequately monitor and enforce the new statute. Over a decade ago, we in McLean County government were told by the state E.P.A. that there was only ONE inspector assigned to *NINETEEN* central Illinois counties, for the purpose of monitoring water quality associated with septic tanks. And that was BEFORE the current state fiscal crisis!! So HOW ON EARTH can we expect I.D.N.R. to have the capacity now -- with so many fiscal pressures on the state? At the very least, make certain that the rules DO NOT WEAKEN -- IN ANY RESPECT -- the statutory language of the law just enacted. The risks of allowing fracking in Illinois already are very high; it could take ONLY ONE INCIDENT to severely impact available water supplies, just as one example. I respectfully urge I.D.N.R. to *carefully* consider the rules you are set to recommend, and to make those rules as strict as possible!! Thank you.

Sincerely,

George J. Gordon

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Ina Wagner

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

The proposed IDNR fracking rules are seriously inadequate and will not protect Illinoisans and our environment from the dangerous byproducts of fracking. The draft regulations create a series of unacceptable loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act. For instance, they make it harder for doctors to get access to information about the secret chemicals used for fracking, and make it easier for the fracking industry to store toxic wastewater in open pits. These and other inadequacies in the proposed rules may allow the fracking industry avoid accountability when it contaminates drinking water. As someone living in the seismically active area of southern Illinois between the New Madrid and Lower Wabash fault lines, I am concerned that these draft regulations do not provide adequate protection against the possibility that fracking will stimulate earthquakes that will endanger hundreds of thousands of people. Further, they impose clearly inadequate fines when companies violate the rules. Finally, in my opinion, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Natalie Erber

Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. As the Illinois DNR you are responsible for protecting the Mahomet aquifer from which hundreds of thousands draw their drinking water. You must make the oil and gas industry store the toxic chemical waste of the fracking process in such a way as not to endanger well water on which Illinois farm families depend. The oil and gas industry must be on the hook for the safety of the underground storage of their toxic waste FOREVER because it will pose a risk FOREVER. Monetary gain is ephemeral compared to the permanent risk of contamination posed by fracking and its wastes. Let us not forget either the potential seismic risks posed by any fracking in the vicinity of the New Madrid. You must make the oil and gas industry operate cleanly and safely first and foremost. Any consideration of the effect of regulation on their profitability MUST take a back seat to the need to effectively reduce the risks to ground water and seismic stability. Stop pandering to industry; protect Illinois citizens.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Until you can assure the citizens of Illinois that every ingredient involved in the fracking process is safe in our State's water supply there is no moral way you can approve such a process in our State. Unless you are willing to drink what the companies are injecting into their wells you should not take a risk with the health of the citizens of Illinois. Our you can approve fracking and hope that the illnesses that will result don't start appearing until your grandchildren have forgotten you had anything to do with it.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

As a grandfather of a 19 month old daughter, I'm worried sick about the potentially permanent effects of groundwater contamination from all of the highly toxic, and totally unnecessary, chemicals freely and irresponsibly used in fracking. My understanding is that Britain and Europe in general ban the use of such chemicals and require public disclosure of every chemical used in the fracking process, and somehow that is not a fatal blow to the fracking industry over there. Why aren't we adopting the same obvious, common sense protections for our public and our children, not to mention ourselves???? Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Sybil H

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Seldom has the very nature of rule making been as critical as it is in the case of the rules being proposed for the regulation of hydraulic fracturing, i.e., "fracking." To quote from the Department's mission, rules concerning fracking should help the Department to "manage, conserve and protect Illinois' natural, recreational and cultural resources, further the public's understanding and appreciation of those resources, and promote the education, science and public safety of Illinois' natural resources for present and future generations." Much about the dangers fracking poses to both the environment and to the health and safety of our citizens remains to be documented. However, there is no shortage or real-life anecdotal evidence suggesting that fracking poses grave risks. The oil and gas industry has worked energetically to obstruct proper scientific inquiry, suggesting that they are aware that full disclosure poses a threat to their profits. For these reasons, the VERY LEAST that fracking regulations should achieve is to arrange the conditions of any fracking in such a way that the industry that profits from fracking must bear full responsibility for the consequences of their activity. The proposed regulations fail this test utterly and should be withdrawn and rewritten from scratch.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Michael Mayer

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jacob Zawa

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Karen Ard

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

I request that you ban fracking until more information is gathered. DO NOT ALLOW current regulation to be used. You know the form letter's information, so I don't feel the need to repeat it. I do think Illinois is being bombarded by corporations who prefer profits to public good. You are here to make sure the corporation's desires do not outweigh public good, not to make sure corporations make money. Please BALANCE public good against corporate profits and pay attention to those without expensive lobbyists. Thank you for paying attention to all citizens' needs.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Rosie Campbell

Long after 4 southern states stopped mainly growing cotton, their soil is contaminated with arsenic from insecticides and we are eating that in our rice. Do you know the possible harm to those that eat that rice? Are you one that has fed that rice to your offspring? We need not risk the lives of our descendants on an unknown risk.

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

David Kvernes

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

"Inadequate" is my description of your proposed fracking rules. They are dangerous and inadequate. I as a resident will not be protected. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, I believe, no regulations can make Illinois fracking safe. Massive pumping of chemicals into the earth poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking. Scrap the proposed regulations. Stop the rush to frack Illinois.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Drew Lung

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Chris March

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Andrew Chrapkiewicz

Our southern Illinois forests and natural habitats are very important to our way of life. more so than a limited economic growth that will not even get to benefit the peoples health it destroys in the affected areas. It will only be a big boom for a small windows and all the profits will be shipped out of the area and then southern Illinois will be left a wasteland.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Andy Pomierny

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Nancy Cullinane

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jennifer Sperry

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

sidney Filer

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

In addition to the standard copied information here, i wanted to add a personal note. The US fracking industry has never reliably proven they can frack and not cause massive problems. They poison drinking water. They destroy communities. They hurt low-income citizens the most and don't provide enough benefit to be worth it. I spent 9 months of my year at college right now in Ohio, partnering with the communities against fracking and seeing first hand the way lack of drinkable tap water impacts their families and their lives. It's terrible. Please, please don't do that to our communities. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Barbara Bailey

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Shawn Lewis

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Bob Dulski

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

This is the WORST thing that you can allow to happen in Illinois. Sooner or later, our public leaders have to realize that to allow fracking in Illinois, the destruction of people, property, environment, water, and wildlife. When the hell are the citizens going to come first, instead of gas and oil destruction for profit????? I am appalled that the truth and known facts of fracking don't supersede the MONEY! It's time that MONEY takes a back seat to the welfare of our people and our planet! STOP this insanity from happening in Illinois!!!!!!

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Sorry for the earlier submission; didn't mean to submit a form letter. For brevity, I am not citing science sources, but as a trained scientist, I attest the evidence is very compelling and easy to find. The known dangers of fracking (groundwater contamination by extremely toxic chemicals [including incredibly dangerous radioactive and endrocrinergic compounds], aromatic hydrocarbon release, wasted water [truly wasted: unpotable for thousands of years], fossil fuel wastage through water and chemical transport and local operations, etc.) plus the very reasonable suspected dangers (crustal instability, atmospheric methane cascade failure, continued reliance on fossil fuels [and the accompanying climate and security dangers], accelerating wealth inequality, etc.) clearly indicate that it is criminally irresponsible to allow fracking in Illinois. We must not allow transient economic interests to seduce/bribe us toward a darker future for our children and grandchildren. We can not afford arrogance to delude us that we completely understand the consequences of this technology, nor that we can "fix" them with more tech (historically, this chain of tautological reasoning has almost inevitably led to ever more complex and dangerous consequences). We are responsible for this land and its inhabitants. If one is theist, then this is a sacred obligation. But even from a non-theist perspective, it is both logical and obvious. Please move as quickly as possible to the elimination of all hydraulic fracturing within the State of Illinois. I hold an oath to support the people and constitution, and I am writing this comment in accord with that oath; please act in accord with your own oaths and consciences. Thank you.

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Deanna Davies

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Matt Berg

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Esad Hamzic

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Saul Aguirre

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Kathy Blair

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Dear Illinois Department of Natural Resources: I am turning in daily comments on your website indicating gaps in your proposed fracking rules. They are dangerously inadequate and will not protect Illinoisans from fracking hazards. I strongly think that you "care" about the safety of your citizens and that you "listen" to their complaints and demands. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. In my comment, I am simply urging you to consider the long term impact of fracking on your citizens and your environment. We the citizens will very likely be victims to illness that will dangerously cripple the economy as our productivity will decrease and the cost of our health services will increase. Numerous alternative energy solutions are emerging with little environmental ramifications. We need to invest in those and work together to ban fracking. Thank you for considering all comments written on the subject.

Sincerely,

May Jadallah

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Marianne Flanagan
1714 E. Forest Ave.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

I want the rules on fracking changed to address the fact that Illinois recently experienced a very bad drought. The fracking operations should be stopped when drought conditions exist so as to not endanger local communities water supply. By this I mean the fracking operations use a tremendous amount of water. Water that, under drought conditions, be needed to maintain the water supply for local people and communities. The local government authority should have the authority to suspend fracking operations when conditions warrant it. Each county should issue water permits with the stipulation that the permit may be suspended when conditions warrant them.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Harriette Manuel

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Ban fracking completely now. Here is why: If we don't act immediately and take draconian action, we humans could be extinct by 2060. This is not a joke. Please read: <http://onlinelibrary.wiley.com/doi/10.1002/wcc.81/full> "Drought Under Global Warming: a Review" by Aiguo Dai atmos.albany.edu/facstaff/adai/ This was made with data on the extent of deserts from 1870 to present. The usual General Circulation [computer] Models [GCMs] were not used. Since the sensitivity was not used, the sensitivity is irrelevant. Civilization still collapses near or shortly after mid-century this century. See the maps of drought in the 2060s on page 15. "Preliminary Analysis of a Global Drought Time Series" by Barton Paul Levenson, not yet published. Under BAU [Business As Usual], agriculture and civilization will collapse some time between 2050 and 2055 due to drought/desertification caused by GW [Global Warming]. Reference: "The Long Summer" by Brian Fagan and "Collapse" by Jared Diamond. When agriculture collapses, civilization collapses. Fagan and Diamond told the stories of something like 2 dozen previous very small civilizations. Most of the collapses were caused by fraction of a degree climate changes. In some cases, all of that group died. On the average, 1 out of 10,000 survived. We humans could go EXTINCT in the 2050s. The 1 out of 10,000 survived because he wandered in the direction of food. If the collapse is global, there is no right direction. We must take extreme action now. Cut CO2 production 40% by the end of 2016. [How to do this: Replace all coal fired power plants with factory built nuclear. Renewables do not work except for niche markets.] Continuing to make CO2 is the greatest imaginable GENOCIDE. We have to act NOW. Acting in 2049 will not work. Nature just doesn't work that way. All fossil fuel fired power plants must be shut down and replaced with nuclear. With factory built nuclear power plants, we can still get it done by the end of 2016.

Sincerely,

Edward Greisch

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Sabiha Ahmed

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Diane Bernardi

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

If the fracking causes ground instability, as it has in other places, whose jobs will be on the block, do you suppose? We live on a fault! Dormant, yes, but wakeable. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Weldon Tallant

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

julie falco

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Dale Grasher

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerous and inadequate. Illinoisans will not be protected from fracking. The draft regulations create dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act. It would be harder for doctors to get access to information about the secret chemicals used for fracking, it would be easier for the fracking industry to store toxic wastewater in open pits, it would help the fracking industry avoid accountability when it contaminates drinking water and impose inadequate fines on companies that violate the rules. Please recognize that no regulations can make fracking safe. Fracking has inherent dangers to public health and safety, pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans. Please scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Richard Rudd

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Erik Peterson

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Margaret Ford

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Heidi Neale

Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. In addition, with the New Madrid major fault zone in the area, only fools would risk triggering a catastrophic earthquake by setting off thousands of deep-underground explosions. You do know about the fault, don't you--the one where a magnitude 7 quake in the early 1800's is said to have still made church bells ring from the swaying ON THE EAST COAST! And aftershocks of magnitude 5 and greater continued for over a year. Or maybe you don't know about it--maybe that is why you have written such lax regulations, rather than simply being in the gas industry's favor over the citizens of Illinois.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Ryan Gifford

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

John Moore Jr

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Karen Orduz

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

To begin with ... WHY is this even happening anywhere within the U.S.? Toxic waste water contaminating our water? Secret chemicals not being mentioned? What's going on? Do we not have enough pollution doing harm to millions? Now we have to worry about another? And our government is ALLOWING IT TO HAPPEN? Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Meredith Carey

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Patricia Y Daniel Driscoll-Shaw

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

sarah Valle

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

The Fracking Law should not be weakened one iota! Caution must be the watchword. History is loaded with a misguided rush of approval for dangerous substances - asbestos, uranium, and tobacco - that are then exposed as hazardous. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Fredrick Fredrick Whalu

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water, and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Costa Nikolaidis

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Regina Grant

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Laurel Smerch

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Edrick Salomon

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Dear, Governor Quinn, please don't let the natural gas industry ruin our state. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Charles Hartline

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Alicia Paravola

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Broucka Sarnoff

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Rm Lewis

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Denis Pierce

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Brian McKee

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Rudy Roman II

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

There is no reason to rush into anything when it comes to fracking. Other states are suffering the consequences of doing just that. Some countries have banned fracking outright. Why? Because it is not safe, in any form, any way, any place. I want to see some conscientious geologists and scientists come on board and tell the people that it can be done safely. They will tell you that fracking cannot be done safely period. Keep our water clean, keep our land quake-free, keep our organic farms, state parks and vineyards toxin-free with access to a clean and plentiful water supply.

Sincerely,

Bonnie Nalley

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Katherine Mitchell

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

I'm concerned about the current proposed fracking regulations. They seem to be far too lax in favor of industry without properly protecting citizens safety and health. I'm especially concerned with the effects that the fracking chemicals, which identification thereof is so secretly guarded, will have on citizens health via well water/water table contamination. Please review and tighten the proposed regulations re fracking to protect Illinois' citizens as well as our natural environment. Thank you.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Rhonda Phillips
