Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Mr Patrick JOSEPH Litzinger

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Larry Connell

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Felicia Holtz

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Deirdre Jameson

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jan Tervydis

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Janet Schneier

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Patrick Moore

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. You should read the article in the Chicago Tribune from Dec. 17, 2013 that describes yet another study that shows that chemicals at fracking site are more prevalent.

Sincerely,

Barbara Tischler

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

William e. Kroll

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

There are so many negatives already given for opposition to fracking, so I'd like to go in a different direction. Can we consider the growth and development of some of the world's most magnificent features for a moment? I'm not thinking man-made but planet-made, like waterfalls, mountains, oceans, plains, rivers, canyons, forests, jungles, lakes, and all the flora and fauna that live in or around these features. Now consider what can and has, in some instances, happened when homo sapiens decides to "alter" natural features for some "gain". Forests are cut for wood to build structures in which to live and work and cut to make more space for other activities, like farming or home construction . In the cutting process, animals are displaced, some of which had small ecological niches and when they're gone, those animals may not find another habitat and, therefore, may not survive. Oceans are home to a vast number of diverse species who live and breathe, breed, and multiply , and, if in large enough numbers, offer us a source of food. However, oil spills, pollution from industrial facilities, illegal dumping from laboratories, medical waste, factory farming waste leeching into rivers then into the ocean are all shortening the life of our oceans. But I'm sure your minds are all made up as to whether pushing fracking forward for your own or a friend's profit is the way you'll vote. Seems like such a malicious joke to hear Christians quote the Bible to prove any idiotic idea, but tend to sidestep something about be stewards of the earth. Stewards must translate into exploiters, destroyers, rapers of the earth. I get so tired of reading about all this crap, just can't get my head around the fact that some folks think all these destructive activities are perfectly dandy. How I wish you would prove me wrong~~~ Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Martin Furlan

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Maryjo Osowski

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking. This makes it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Contamination of the ground water for the profit of private industry passes on to the people large costs of water purification by municipal water utilities and very large health costs which will be mostly unaccounted by being hard to attribute. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking. Scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Scott Dallmeyer

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Mr. Robert Hanahan

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Lucy Bocian

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Stella Christensen

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Sharon Lundeen

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Ilse Ziemann

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Steve Weinschel

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Edward Gogol

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Dear Sir/ Madame: In my view, the fracking rules you propose are dangerous and will not protect Illinoisans from fracking. As I see it, the draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe, in my view. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking, in my perspective. For safety, I request you scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Myra Walden

Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. Have you bothered to see the damage fracking did to eastern Colorado last summer????? That whole area looks like a bomb blast thanks to fracking, not to mention the water has been destroyed! This is not an isolated incident so don't give me any more lies about that. What is the matter with you GUYS????? Wake up and smell the coffee. The prohibitive cost to Nature and the people around fracked land is astronomical. Go FRACK YOURSELF!

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Amy Sherman

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from the pollution and habitat destruction that results from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water, and imposing only paltry fines on companies that violate the rules. The bottom line is that no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, wastes huge amounts of potable water, and accelerates climate change. Only an all-out ban on fracking will truly protect Illinoisans from the environmental and health damages that are inherent in the process - even when it is done "cleanly" by industry standards. We need to scrap the proposed regulations and ban fracking in Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Please fix these loopholes that weaken key parts of the Hydraulic Fracturing Regulatory Act:
Loophole #1 - making it harder for doctors to get access to information about the secret chemicals used for fracking. Loophole #2 - making it easier for the fracking industry to store toxic wastewater in open pits. Loophole #3 - helping the fracking industry avoid accountability when it contaminates drinking water. And Loophole #4 - imposing paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. Look at problems in Ohio, Pennsylvania and Oklahoma - and ban fracking in Illinois!

Sincerely,

David Ziegler

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Janice Koppenhaver

Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. Our natural resources should NOT be used to pad the wallets of greedy businesses that will despoil the environment and our health. Frackers need to go back to the drawing board and think of a new, environmentally safe way to frack. They are taking the lazy way out and the citizens will be bearing the brunt of their damage. That is simply unacceptable.

Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. I am 100% against fracking. I do not believe it is safe for people or our planet. It amazes me that people believe that jobs and fossil fuels are worth doing irreparable damage to our environment and our health! Instead of fanatically pursuing the fossil fuels that are getting harder to find and are being rapidly depleted we should be fanatically pursuing clean and sustainable energy sources!

Sincerely,

Rebecca Reed

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Geoffrey Bodwin

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Most of us understand that you want to be able to grease the skids to fracking permits. You are willing to negate the clean air and water acts for which citizens fought. You seem to think we will forget about that fight. You seem to think we will forget who gave away our beautiful parks and sparkling rivers to polluters. But I'll remember that, if you fast-track fracking permits, the terribly misnamed Department of Natural Resources let oil and gas interests take away our health and well being. People are a natural resource. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

grant dittmer

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

I have carefully watched the results of fracking in other areas of our country. I have seen how the public... individual citizens have not been able to depend on governmental agencies to protect their property and health as we in America have come to expect from such. We need better in Illinois! We cannot follow blindly, knowing the destruction that has already happened elsewhere. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Nancy Plankis

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Max M

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

It appears that we have learned nothing from the industrial revolution. Water and air are not replaceable and should be above all concerns for some company and a few jobs. Where are we to go if our water is spoiled? Who will pay? Why don't we have a deal like Alaska where the citizenry will directly benefit if it is so profitable? The chemicals used if it gets into the aquifer will be devastating and cleanup in the billions of dollars that we don't have. This state has been poorly governed let us not continue the trend.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Mary Stitt

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Marilyn G. Mason

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Ann Ayers

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Rick Johnson

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Mary Savitsky-Ulowetz

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Lloyd Tackett

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

THOMASSIQUE EVANS

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Sherri Samelak

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RENEE L. ABOS

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Mary Sajdak
2113 Ridgefield Drive
Belvidere, IL 61008-6464

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Susan Stetson

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Joseph Malmquist

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Annette Burman

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Cheryl Saunders

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Robert Villanueva

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Kelly Weinberger

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

edward shannon

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Remember the fracking they did in Iceland? Now they suffer in ways not thought of, water pollution, earthquakes, strong earthquakes that have damages their infrastructure as well as homes. Is this what we want here in the US? With a recently active fault line in Illinois and the super volcano swelling in Yellowstone, do we need to do this and risk destroying lives and property? Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Lyle V. Johnson

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Adam Ware

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

peter izquierdo

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Robert Satler

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Michael Runyon

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Dale Pivarunas

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

The proposed fracking rules are inadequate to protect Illinoisans from water and other environmental damage. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking and making it easier for the industry to store toxic wastewater in open pits. The state should not be helping the fracking industry avoid accountability when it contaminates drinking water. Any fines should be large enough to discourage companies from violating the rules and seriously punish those who do. Regulations can not make fracking safe. It poses inherent dangers to public health and safety. Only a ban on fracking will truly protect Illinoisans from fracking. Withdraw these proposed rules and ban fracking in Illinois.

Sincerely,

michael griffith

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Patricia Rohde

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Katherine Felt Armstrong

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

The industry should be required to use the latest water clean-up technology which is a system developed by Memsys Clearwater, based in Germany and Singapore and is called vacuum multi-effect membrane distillation. It combines two established ways of desalinating water: distillation and membrane separation. It is more effective and less expensive than current methods. Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Nancy Willett

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Fracking is even more devastating for public health and the environment than dumping toxic waste. It not only exposes every living thing to toxic chemicals, contaminating soil, air, and water - it disturbs the geology of the surrounding area, creating potentially hazardous instability. I am completely against fracking in any state, but if it is allowed, it must be RIGOROUSLY regulated. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Mark Hillenbrand

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are inadequate and will not protect Illinois residents from the dangers of fracking. It is clear that fracking poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. How are we to protect ourselves from these "secret chemicals" that are being used by the fracking industry? The draft regulations make it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water. Further, only paltry fines are levied on companies that violate the rules. That simply makes the fines "the cost of doing business" rather than a punishment for a violation of the law. I want strict controls and transparency of the fracking industry in Illinois. The DNR can do better for the people of Illinois.

Sincerely,

Richard Hosteny

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Robert E. E. Lerner

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

David E. Berchtold
