RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Zack Malitz

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

P M

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Janice Dayton

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Adam Smith

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

ILLINOISANS WILL NOT BE BOUGHT OUT BY NATURAL GAS LOBBYISTS AND THEIR BIG POCKETBOOKS!!! WE ILLINOISANS DO NOT WANT FRACKING ON OUR LANDS AND POLLUTING OUR PRECIOUS RIVERS, LAKES & AQUIFERS! WE WILL FIGHT FEROCIOUSLY TO BAN FRACKING IN OUR STATE UNTIL ALL THE RESEARCH IS IN AND ANY & ALL PRECAUTIONS HAVE BEEN TAKEN. WE WILL NOT PERMIT OPEN DOOR FRACKING WITH YOUR RIDICULOUS PROPOSAL! Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

NICK BECK

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jay Maynard

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

We need our ground water and crop lands to be safe from industrial fracking poisons. What are the chemicals? Just name any industrial WASTE that the company does not want to pay to be properly disposed of- that is what they pump into their wells. On our lands, they do this, and it leaches up gradually in some cases and explosively in others, following natural cracks in the rock strata. IT IS A BAD IDEA, plain and simple. End it! -C.A. Johnston Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Holly Gietl

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Scott Hubbard

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Mark Miller

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Kate Kasserman

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Lynn Fingerhut

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Gabriel Neilson

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Linda Morris

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Here in Illinois we have the opportunity to learn from the mistakes made by other states, who eagerly opened their doors to fracking based upon the perceived economic benefits. The economic gains from fracking are easy to see. What only gets revealed over time is the dreadful cost of polluting our water. These are costs that generations of Illinois citizens will continue to bear, in the form of a toxically polluted water supply. Please, please think ahead: the long-term costs for the state (in environmental degradation and public health) dwarf the short-term gains produced by allowing these businesses to begin using hydraulic fracturing technologies in Illinois. I know you have heard the horror stories about the health problems and environmental destruction caused by the introduction of hydraulic fracturing in other states. We still have the chance to escape their fate. We still have the chance to keep our drinking water safe. After all these other states have gone down to the path of energy production, the value of our uncontaminated water will rise. From an economic perspective alone, that seems important. I beg you to opposed the Illinois Hydraulic Fracturing Regulatory Act, which does not serve the best interests of Illinois.

Sincerely,

Jennifer Burns

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Michael Gicela

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act. This will make it harder for doctors to get access to information about secret chemicals used for fracking, make it easier for the fracking industry to store toxic wastewater in open pits, help the fracking industry avoid accountability when it contaminates drinking water and impose only minimal fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. Thank you for your consideration of my views.

Sincerely,

David Barnett Ph.D.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Valdeneo Ortiz

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

With all the cases of water contamination, the earthquakes in Texas happening around fracking sites, etc. The towns where the drinking water catches on fire.. Why would you want this in our state? The energy industry could invest in alternative energy sources but the profit margin might be smaller so they continue to push for legislation that lets them pollute our environment and leave the taxpayers to clean up their mess. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Craig Foley

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Amy Dicker

Certainly corporate greed is feeding the greed of certain politicians who draft these loop-hole filled so called regulations..... The "Will of the People" is no longer paramount in the eyes of those who've been "Elected To SERVE", for them personal wealth and the power it brings is THEIR "first" priority! "I challenge you to prove me wrong!"

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Carol HALPERN

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Randi Holt

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Merrill Cole

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

alex bukhover

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

roberta anderson

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Rita Kain

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jennifer Harris

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Michelle Heyden

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Carolyn and John Sanderson

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Illinois Department of Natural Resources: Talk about reckless endangerment! Surely you realize that millions of people across the state may lose access to local drinkable water because of tracking. That trackers don't have to disclose the identity of the chemicals they force into the ground near water supplies, or run baseline tests on local water quality before tracking begins. That tracking could seriously destabilize the land upon which our aging nuclear reactors sit. And that tracking is not necessary for the energy future of this country. It is simply a bonanza for companies that should be turning to better things, such as clean energy. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Chuck Quilty

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Melany Telleen

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Karen Gollrad

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Al Trutter

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Carol Haliday

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Kathy Michaelson

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

I am one of the original, modern environmental/energy/conservation activists dating back to around the very first "EARTH DAY" (Wednesday, April 22, 1970), over 43 years ago. I have a Bachelor of Science (B.S.) Degree in Biology and Environmental Studies from Dana College, Blair, Nebraska. I am the Vice President of the Chicago-based Nuclear Energy Information Service (NEIS), "Illinois' Nuclear Power Watchdog Group," which opposes all gas and oil 'fracking' because of the radioactive contamination that it could cause (more about that later). Continuing on, speaking as an energy-environmental researcher, your proposed rules to supposedly "regulate" oil and gas 'fracking' (hydraulic fracturing/horizontal drilling) are DANGEROUSLY INADEQUATE--and will NOT protect Illinoisans from the real problems caused by 'fracking.' The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for 'fracking,' making it much easier for the 'fracking' oil and gas companies to store toxic wastewater in open pits, helping the 'fracking' companies avoid accountability when they contaminate drinking water, and imposing only paltry fines on the companies which violate the rules. FURTHERMORE, NO REGULATIONS CAN ACTUALLY MAKE OIL AND GAS 'FRACKING' SAFE! (It poses inherent dangers to public health and safety, inevitably pollutes our water and air, and accelerates disruptive climate change.) Only an IMMEDIATE, COMPLETE, AND PERMANENT STATEWIDE BAN on all 'fracking' will truly protect Illinoisans from 'fracking'-- PLEASE SCRAP THE PROPOSED WEAKER REGULATIONS NOW, AND STOP THE RUSH TO 'FRACK' IN THE "LAND OF LINCOLN" AT ONCE! Here is a final item (that was alluded to earlier): A study by Duke University's Nicholas School of the Environment examined the quality of shale gas wastewater in western Pennsylvania from 'fracking' and the stream water above (and below) the disposal site. Radium levels were about 200 times greater in sediment samples collected where the Josephine Brine Treatment Facility discharges its treated wastewater into Blacklick Creek in western PA than in sediment samples collected just upstream of the plant. In fact, the radioactivity levels found in sediments near the outflow are above the U.S. management regulations, and would only be accepted at a licensed radioactive management facility. (The Marcellus shale gas flowback water is naturally high in salinity and radioactivity.) ["Radioactive Shale Gas Contaminants Found at Wastewater Discharge Site," phys.org, October 2, 2013.] WHILE I AM NOT SURE ABOUT WHAT THIS SITUATION WOULD BE IN DOWNSTATE ILLINOIS, IT WOULD DEFINITELY BE WORTH CLOSELY WATCHING: HOWEVER, WHAT IT BOILS DOWN TO IS THAT WE SHOULD "ERROR ON THE SIDE OF CAUTION"--PLEASE SCRAP YOUR DANGEROUS PRO-OIL AND GAS 'FRACKING' REGULATIONS NOW, AND BAN ALL 'FRACKING' WITH DELIBERATE SPEED!

Sincerely,

CREDO Action

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Kathleen S. Klok

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Brian O'Grady

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

As you know, the draft IL DNR fracking rules are outrageously and dangerously inadequate, and will not protect Illinoisans and the Illinois environment from fracking. The draft regulations create a series of huge, dangerous loopholes that weaken key parts of the Hydraulic Fracturing Regulatory Act, including: by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water, and imposing laughable "fines" on corporations which violate the rules. Further, and most importantly, no regulations can make fracking safe. Fracking causes great harm to the public health, safety, and welfare and the environment. It always will inevitably pollute the water and the air and the land, and accelerates climate change. Only a full ban on fracking will protect Illinoisans and the Illinois environment from fracking. Therefore, I demand that IL DNR and the government of Illinois scrap the draft regulations, stop all plans to frack Illinois, and immediately institute a comprehensive, emergency plan to transition the Illinois human society off of all fossil fuels and on to 100% solar and wind power.

Sincerely,

BA Dolores C. Pino J.D.

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Robert Pancner

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Kent Budke

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

In spite of Frackers' complaints that the "oil and gas glut" that they've already built up has dropped prices so low that their expected dollar bonanza has dried up, they want to frack the bejeebers out of the whole world - RIGHT NOW, before the environmental disasters they're creating manifest clearly, for all to see. Oil and gas in the ground is a beautiful thing! It will only become more valuable, if we WAIT - while they liquify the gas, put it on ships, and squander our alleged "100-year supply" profiteering in hungrier international markets. We basically GIVE AWAY these mineral resources to them, after all, and very few permanent local jobs are created in the extraction process. And just imagine the real estate boom that Illinois will experience, when this turns out to be one of the few remaining regions where humans, farm animals and wildlife still experience an acceptable quality of life! Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Thomas A Miceli

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Fracking, from what I understand after hearing scientists speak at Fermi National Accelerator Laboratory recently, is basically unregulated and in being so, opens doors for catastrophic problems for our environment. As we know, businesses will do what makes money fast, not what protects citizens. Given this, your proposed fracking rules are dangerously inadequate and will not protect Illinoisans. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act. by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. Until we have better regulations, we are crazy to let a few businesses make a lot of money at the expense of public safety.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

John Malan

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jim Thale

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jan Peters

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

As a long time resident of Illinois, I demand that regulations involving fracking be greatly increased. The current proposal endangers citizens with no accountability for the polluters. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Richard Prendergast

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Karen E Smith

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

William S. Hermes

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jason Rossi

If these companies want to do this, in exchange, they should reveal all of the chemicals used and drop their objections on the grounds these are "proprietary". Without that show of good faith they should not be allowed a permit.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Karen Gubbins

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Janet Potts

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

David Schwebke

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Linda Davis

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Andra Addis

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Charles Ginsberg

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

wendell (windy) childs

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Patrick Dillon

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

I'm sure there's ways yet discovered of getting at that gas without destroying valuable water sources. If not, then they have no business in the fracking business. I firmly believe both the users and producers of energy should bear the costs and not pass along externalities. Ultimately, the tax payers pick up the tab. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules.
