Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Alicia Klepfer Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Alonzo Cummins Chicago, IL 60612

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Alonzo Cummins Chicago, IL 60612

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Alonzo Cummins Chicago, IL 60612

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, andrew hwang Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Andrew Sigman Chicago, IL 60651

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Anna Betts Chicago, IL 60607

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Ashish Kathuria Vernon Hills, IL 60601

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Ava Benezra Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Bing Li Chicago, IL 60608

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Breanna Champion Chicago, IL 60616

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Brian Menzel Chicago, IL 60608

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Bruce Anderson Rolling Meadows, IL 60008

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Chris Turner Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Chris Turner Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Cindy Chung Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Dakota Dompke Belleville, IL 62221

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Daniel Ramus CHicago, IL 60625

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, David Zask NY, IL 10128

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, David Zask NY, IL 10128

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Donovan Snyder Snyder Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Dylan Amlin Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, E Zemin Champaign, IL 61821

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Elizabeth Scrafford chicago, IL 60626

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Elizabeth Scrafford chicago, IL 60626

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Emilio Joseph Comay del Junco Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Emilio Joseph Comay del Junco Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Eve Zuckerman CHicago, IL 60615

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Francis Beach Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Frank Pettis Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alphaBenzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Girwana Baker Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Glen Edward Litchfield Darien, IL 60561

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Hannah Kershner Galena, IL 61036

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Harry Li Naperville, IL 60564

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Jason Busser Dixon, IL 61021

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Jeff Engstrom Urbana, IL 61801

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Jessa Dahl Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Joe Kapran Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Johh Haggerty NYC, IL 11215

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, John Hunt Chicago, IL 60641

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, John Hunt Chicago, IL 60641

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Jorge Sanchez Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Kaijie Wang Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Kathy Machaj Chicago, IL 60607

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Katie Lettie Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Ken Buck Naperville, IL 60540

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Kevin Casto Chicago, IL 60615

The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Kris Chatterjee Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Kurt Witteman Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Lexington Lawson Chicago, IL 60640

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Louis Clark Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Lupita Carrasquillo Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Maddison Davis Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Sincerely, Mary Trimmer Granite City, IL 62040

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Mary Trimmer Granite City, IL 62040

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Maryann Condren Naperville, IL 60540

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Michael Lang 1206 N Elmwood Peoria, IL 61606

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Michael Perino Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Min Li Naperville, IL 60564

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Molly Blondell Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Nancy Penney Monticello, IL 61856

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Nancy Penney Monticello, IL 61856

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Navroz Tharani Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Neeta D'Souza Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Nour Abdelmonem Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Paulo Nacimiento Chicago, IL 60637

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Rachel Katz Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Ramon Valladarez Chicago, IL 60642

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Roberta Weiner Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Roberta Weiner Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Rohit Satishchandra Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Samantha Martin Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Samantha Martin Chicago, IL 60605

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Sara Buck Chicago, IL 60640

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alphaBenzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Sarah Kindt Chicago, IL 60607

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Scott Condren Chicago, IL 60608

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Scott Condren Chicago, IL 60608

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Shaden Amara Naperville, IL 60564

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Shrabya Timinsia Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Simone Serhan Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Ta Promlee Chicago, IL 60645

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Tim Dompke Collinsville, IL 62224

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Tommy Talley Chicago, IL 60617

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Tommy Talley Chicago, IL 60617

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Tybee McLaughlin Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Tybee McLaughlin Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Veronica Murashige Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Veronica Murashige Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Weili Zheng Chicago, IL 60607

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Westin Campo chicago, IL 60608

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Will Fernandez Chicago, IL 60615

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, William Toole Godfrey, IL 62035

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Young-In Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Yvette McGivern Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Zach Taylor Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process.

Sincerely, Zach Taylor Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Zach Taylor Chicago, IL 60637

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

Section 1-80 of the Act governing Water Quality Monitoring provides a list of indicator chemicals that would suggest water contamination has occurred but doesn't limit what may be tested for. In fact, this section of the law states that "Sampling shall, at a minimum, be consistent with the work plan and allow for a determination of whether any hydraulic fracturing additive or other contaminant has caused pollution or diminution for purposes of Sections 1-83 and 1-85 of this Act." Section 1-85 of the Act governing the presumption of pollution or diminution does not limit the sources of sampling data that may be used to prove the pollution or diminution has occurred. And yet, the IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for. The 1-80 parameters are intended to be INDICATORS of the presence of contamination from hydraulic fracturing, not an exclusive list of the possible contaminating constituents. There are over 700 chemicals used in fracking. 1-80 lists only a handful of them. A reasonable person would conclude that if a chemical other than those on the list of indicator chemicals was found and that chemical was part of the list of chemicals in the fracking operator's work plan, then the operator would be presumed to be responsible for that contamination. Section 1-85(a) states that it "establishes a rebuttable presumption for the purposes of evidence and liability under State law regarding claims of pollution or diminution of a water source and for use regarding the investigation and order authority under Section 1- 83" (emphasis added). The "and" is disjunctive, such that claims for pollution and diminution are not tied to or contingent on the investigation and order authority under section 1-83. Regardless, nothing in section 1-83 limits investigation and order authority to the constituents tested for under section 1-80; on the contrary, that section expressly references "pollution or diminution," which as discussed above is broadly defined with reference to the Illinois Administrative Code. See section 1-83(a) ("Any person who has reason to believe they have incurred pollution or diminution of a water source as a result of high volume hydraulic fracturing treatment of a well may notify the Department and request that an investigation be conducted") (emphasis added) and 1-83(d) ("if sampling results or other information obtained as part of the investigation or the results of tests conducted under subsection (c) of Section 1-80 of this Act indicate [pollution or diminution violations], the Department shall issue an order…") (emphasis added). In sum, it is clear hat section 85 of the Act creates a presumption of liability for all constituents contained in the Act's definition of "pollution or diminution," not solely for the constituents tested for under section 1-80. Revisions Needed: Section 245.620 must reflect the intent of the law that the operator will be responsible for any pollution or diminution caused by fracking. This responsibility will not be limited to a list of indicator chemicals but will include all chemicals used in the fracturing process. Furthermore a number of provisions in the draft rules nonetheless inappropriately purport to limit evidence triggering the presumption to the section 1-80 sampling results. The particular provisions of concern are as follows: a. 245.620(b)(2) – the word "the" before "baseline water quality data" should be stricken to make clear that any baseline water quality data, not just the data collected pursuant to the

Act's requirements, may trigger the presumption. b. 245.620(b)(4) – this section should preferably be amended to mirror subparagraph (b)(2) (amended per above recommendation), i.e., state that "water quality data obtained up to 30 months after commencement of HVHHF operations shows that pollution or diminution of water quality has occurred with respect to one or more parameters" set forth in the relevant section of the Environmental Protection Act regulations referenced at 245.610(e). c. 245.620(c)(4) – this section is superfluous, as well as confusing for the reason specified below. If the water quality data (broadly defined per above) do not show pollution or diminution, then there is no presumption to rebut. The relevant concept from the statute that should be reflected here, and is not, is from subsection 1-85(c)(3), specifying that the presumption can be rebutted if it can be affirmatively established that the pollution or diminution had an identifiable cause other than HVHHF operations. To illustrate how severely the Department's unauthorized limitation of section 1-85 of the Act has curtailed its scope, we offer the following list of chemicals that are covered by the statutory definition of "pollution or diminution" that should therefore also be subject to the presumption according to the plain language of section 1-85. Shown capitalized are the few constituents that remain subject to the presumption under the Department's truncated interpretation: • Detection of any: BENZENE, any other carcinogen • Preventive Response Criteria at 35 IAC 620.310(a)(3)(A)(i): para-dichlorobenzene, ortho-dichlorobenzene, methyl tertiary butyl ether (MTBE), phenols, styrene, TOLUENE, ETHYLBENZENE, XYLENES, • 35 IAC 620.410: (a) antimony, ARSENIC, BARIUM, beryllium, CADMIUM, CHLORIDE, CHROMIUM, cobalt, copper, cyanide, fluoride, IRON, LEAD, MANGANESE, MERCURY, nickel, nitrate as n, perchlorate, Radium-226, Radium-228, SELENIUM, SILVER, SULFATE, thallium, TDS, vanadium, zinc; (b) Acenaphthene, Acetone, Alachlor*, Aldicarb, Anthracene, Atrazine, Benzene [repeat], Benzo(a)anthracene*, Benzo(b)flouranthene*, Benzo(k)floranthene*, Benzo(a)pyrene*, Benzoic acid, 2-Butanone (MEK), Carbofuran, Carbon Disulfide, Carbon Tetrachloride, Chlordane*, Chloroform*, Chrysene*, Dalapon, Dibenzo(a,h) anthracene*, Dicamba, Dichlorodiflouromethane; 1,1-Dichloroethane, Dichloromethane*, Di(2- ethylhexyl)phthalate*, Diethyl Phthalate, Di-n-butyl Phthalate, Dinoseb, Endothall, Endrin, Ethylene Dibromide*, Flouranthene, Flourene, Heptachlor*, Heptachlor Epoxide*, Hexachlorocyclopentadiene, Indeno(1,2,3-cd)pyrene*, Isopropylbenzene (Cumene), Lindane (Gamma-Haxachlorocyclohexane), 2,4-D, ortho-Dichlorobenzene, para-Dichlorobenzene; 1,2- Dibromo-3-Chloropropane*; 1,2-Dichloroethane*, 1,1 Dichloroethylene, cis-1,2- Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane*, Ethylbenzene, MCPP (Mecoprop), Methoxychlor, 2-Methylnaphthalene, 2-Methylphenol, Methyl Tertiary-Butyl Ether (MTBE), Monochlorobenzene, Naphthalene, P-Dioxane*, Pentachlorophenol*, Phenols, Picloram, Pyrene, Poly-chlorinated Biphenyls (PCBs) (as decachloro-biphenyl)*, alpha-BHC (alpha- Benzene hexachloride)*, Simazine, Styrene, 2,4,5-TP (Silvex), Tetrachloroethylene*, Toluene, Toxaphene*, 1,1,1-Trichloroethane; 1,1,2-Trichloroethane; 1,2,4- Trichlorobenzene; Trichloroethylene*; Trichlorofluoromethane; Vinyl Chloride*, Xylenes; (c) 1,3-Dinitrobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, HMX (High Melting Explosive, Octogen); Nitrobenzene; RDX (Royal Demolition Explosive, Cyclonite), 1,3,5- Trinitrobenzene; 2,4,6- Trinitrotoluene (TNT); (d) [repeats]; (e) PH. • Chemicals with 35 IAC 720 Groundwater Cleanup Objectives (not already listed above): Aldrin, Bis(2-chloroethyl)ether, Bis(2-ethylhexyl)phthalate (Di(2- ethylhexyl)phthalate), DDD, DDE, DDT, 1,2-Dibromoethane, 3,3'-Dichlorobenzidine, Dieldrin, Hexachlorobenzene, Alpha-HCH,

N-Nitrosodi-n-propylamine, 2,4,6-Trichlorophenol, Bromodichloromethane (Dichlorobromomethane), Bromoform, Butanol, butyl benzyl phthalate, carbazole, 4-Chloroaniline (r-Chloroaniline), Chlorobenzene (Monochlorobenzene), Chlorodibromomethane (Dibromochloromethane), 2-Chlorophenol (pH 4.9-7.3), 2-Chlorophenol (pH 7.4-8.0), 1,1-Dichloroethane, 2,4-Dichlorophenol, 1,2-Dichloropropane; 1,3-Dichloropropene (1,3-Dichloropropylene, cis + trans); Diethyl phthalate; 2,4- Dimethylphenol; 2,4-Dinitrophenol; Di-n-octyl phthalate; Endosulfan, Hexachloroethane, Isophorone; Methyl bromide (Bromomethane); Methyl tertiary-butyl ether; Methylene chloride (Dichloromethane); 2-Methylphenol (o-Cresol); N-Nitrosodiphenylamine; N-Nitrosodi-npropylamine; Pentachlorophenol; 2,4,5-Trichlorophenol (pH 4.9-7.8); 2,4,5-Trichlorophenol (pH 7.9-8.0); 2,4,6-Trichlorophenol (pH 4.9-6.8); 2,4,6-Trichlorophenol (pH 6.9-8.0); Vinyl acetate; Boron, CALCIUM; Chromium, ion, hexavalent; MAGNESIUM, phosphorus, potassium, sodium. We note that this concern is not by any means academic: at least some of these excluded constituents are found on FracFocus, indicating that they have been used in fracking operations.

Sincerely, Zaid Mctabi Chicago, IL 60605

In reference to Subpart F: Water Quality

Section 245.620 Rebuttable Presumption of Pollution or Diminution

The IDNR Rules in Section 245.620 have narrowed the statutory basis for the presumption, treating Section 1-80's list of "indicator chemicals" as a comprehensive list of what should be tested for in the event a complaint is filed. However: A 2011 report released by congressional Democrats lists)750 chemicals and compounds used by 14 oil and gas service companies from 2005 to 2009 used to help extract natural gas from the ground (see http://democrats.energycommerce.house.gov/sites/default/files/documents/Hydraulic- Fracturing-Chemicals-2011-4-18.pdf. That list includes 29 chemicals that are either known or possible carcinogens or are regulated regulated under the Safe Drinking Water Act for their risks to human health, or listed as hazardous air pollutants under the Clean Air Act. During hydraulic fracturing, fluids containing chemicals are injected deep underground, where their migration is not entirely predictable. Well failures, such as the use of insufficient well casing, could lead to their release at shallower depths, closer to drinking water supplies. Although some fracturing fluids are removed from the well at the end of the fracturing process, a substantial amount remains underground (source: John A. Veil, Argonne National Laboratory, Water Management Technologies Used by Marcellus Shale Gas Producers, prepared for the Department of Energy (July 2010). The amount of fluid that remains in a well varies depending on local geology. In many cases, particularly in the Marcellus Shale in the Northeast, more than three-quarters of the fluid is left underground. (source: http://www.propublica.org/article/new-gas-wellsleave- more-chemicals-in-ground-hydraulic-fracturing) CONCERN - The IDNR should be working with scientists (not just industry specialists and environmental organizations) to develop rules that implement the intent of the regulations, which are to protect the public health, safety and welfare from harm associated with hydraulic fracturing. It is in the industry's best interest to limit testing to indicator chemicals, and perhaps in the agency's best interest as well, since it would be easier to determine pollution or diminution if the list of chemicals used to make that determination were finite or limited. However, according to the 2011 report by the House Committee on Energy and Commerce: "The companies used 94 million gallons of 279 products that contained at least one chemical or component that the manufacturers deemed proprietary or a trade secret. In many instances, the oil and gas service companies were unable to identify these "proprietary" chemicals, SUGGESTING THAT THE COMPANIES ARE INJECTING FLUIDS CONTAINING CHEMICALS THAT THEY THEMSELVES CANNOT IDENTIFY" (emphasis mine). The report further states that methanol, which was used in 342 hydraulic fracturing products, was the most widely used chemical between 2005 and 2009. The substance is a hazardous air pollutant and is on the candidate list for potential regulation under the Safe Water Drinking Act. Isopropyl alcohol, 2-butoxyethanol, and ethylene glycol were the other most widely used chemicals: * When ingested, isopropyl alcohol functions primarily as a central nervous system (CNS) inebriant and depressant, and its toxicity and treatment resemble that of ethanol. Fatality from isolated isopropyl alcohol toxicity is rare, but can result from injury due to inebriant effects, untreated coma with airway compromise, or rarely, cardiovascular depression and shock following massive ingestion. Supportive care can avert most

morbidity and mortality. source: http://www.uptodate.com/contents/isopropyl-alcohol-poisoning * Moderate respiratory exposure to 2-butoxyethanol often results in irritation of mucous membranes of the eyes, nose and throat. Heavy exposure via respiratory, dermal or oral routes can lead to hypotension, metabolic acidosis, hemolysis, pulmonary edema and coma. U.S. Employers are required to inform employees when they are working with this substance. Source: http://en.wikipedia.org/wiki/2-Butoxyethanol * Acute exposure of humans to ethylene glycol by ingesting large quantities causes three stages of health effects. CNS depression, including such symptoms as vomiting, drowsiness, coma, respiratory failure, convulsions, metabolic changes, and gastrointestinal upset are followed by cardiopulmonary effects and later renal damage. Source: http://www.epa.gov/ttn/atw/hlthef/ethy-gly.html NONE OF THESE CHEMICALS are listed as one of the indicator chemicals in either the rules or the regulations. CORRECTIVE ACTION - The list of chemicals included in Section 245.620 of the IDNR rules needs to be expanded to represent industry practices as presented in the 2011 report by the House Committee on Energy and Commerce AND any analysis provided by the scientific community that provides more comprehensive documentation. This Section also should include a provision that recognizes that chemicals or additives determined to be harmful to human health that are not listed in the rules also need to be taken into consideration when making a determination of pollution or diminution if such chemicals or additives were not present at the time of baseline testing.

Sincerely, Pamela J. Richart 1645 W. Jarvis Chicago, IL 60626

In reference to Subpart G: Chemical Disclosure; Trade Secrets

Section 245.720 Department Publication of Chemical Disclosures and Claims of Trade Secret

“Competitive value” is not defined in the various administrative code definitions. There is no IDNR administrative criteria provided which is the basis of “competitive value” other than, apparently, a self-identified one provided by the fracking operator. “Competitive value” must be fully defined within the rulemaking. Competitive value must not in any way supersede a determination of the public right to know and the basic legislative and Illinois Constitutional provision of a healthy and safe environment for its citizens. Any conflict between “competitive value” and the public right to know must be decided on the inherent protection of the citizens and the environment.

Sincerely, Dominic Giafagleone Carbondale, IL 62901

In reference to Subpart G: Chemical Disclosure; Trade Secrets

Section 245.720 Department Publication of Chemical Disclosures and Claims of Trade Secret

IDNR's administrative rules allow permit applicants to withhold information used in the fracking process based on "competitive value." However, this term is undefined in the rules and makes no exception for the public's right to know for reasons related to the public's and environmental health and potential occupational exposure. Competitive value should not become a catchall phrase that weighs profit more heavily than public health. The rules should clearly define competitive value. This term should in no way override the provision in the Illinois Constitution that guarantees its citizens a healthy and safe environment. All decisions must hold the health of Illinois citizens above all else.

Sincerely, Sara Buck Chicago, IL 60640

In reference to Subpart G: Chemical Disclosure; Trade Secrets

Section 245.720 Department Publication of Chemical Disclosures and Claims of Trade Secret

IDNR's administrative rules allow permit applicants to withhold information used in the fracking process based on "competitive value." However, this term is undefined in the rules and makes no exception for the public's right to know for reasons related to the public's and environmental health and potential occupational exposure. Competitive value should not become a catchall phrase that weighs profit more heavily than public health. The rules should clearly define competitive value. This term should in no way override the provision in the Illinois Constitution that guarantees its citizens a healthy and safe environment. All decisions must hold the health of Illinois citizens above all else.

Sincerely, Sara Buck Chicago, IL 60640

Section 245.720 Department Publication of Chemical Disclosures and Claims of Trade Secret

OKAY SO IDNR IS PROTECTING CORPORATIONS MORE THAN CITIZENS JUST BE HONEST ABOUT IT IF THIS IS THE CASE: Section 245.720(d) of the Proposed Hydraulic Fracturing Regulatory Act administrative rules, states: IDNR allows permit applicants to withhold chemical disclosure information under a claim of "trade secret" if they can establish that (1) the information has not been published, disseminated, or otherwise become a matter of general public knowledge, and (2) the information has competitive value. Problems with this section: "Competitive value" is not defined in the various administrative code definitions. There is no IDNR administrative criteria provided which is the basis of "competitive value" other than, apparently, a self-identified one provided by the fracking operator. Why these are problems: Undefined and catch-all allowances for generic "competitive value" open the door for any and all dangerous chemicals to be undisclosed simply based on the operators desire to do so. Individual ingredients in the various chemical products used during hydraulic fracturing cannot be considered trade secrets under the criteria "competitive value". The regulations should be revised to state that information on file with IDNR must be disclosed to the public. Raising such an allowance for a fracking operator to not disclose potentially dangerous chemicals based on "competitive value" automatically gives them more power than the basic claim of the law which is to protect the environment of Illinois. Revisions Needed: "Competitive value" must be fully defined within the rulemaking. Competitive value must not in any way supersede a determination of the public right to know and the basic legislative and Illinois Constitutional provision of a healthy and safe environment for its citizens. Any conflict between "competitive value" and the public right to know must be decided on the inherent protection of the citizens and the environment.

Sincerely, Harry Li 2656 Boddington Lane Naperville, IL 60564

In reference to Subpart G: Chemical Disclosure; Trade Secrets

Section 245.720 Department Publication of Chemical Disclosures and Claims of Trade Secret

Section 245.1100 states that the Department may revoke for a wide variety of infractions: "The Department may, through the enforcement process set forth in this Subpart, suspend or revoke a high volume horizontal hydraulic fracturing permit, order actions to remediate, or issue administrative penalties for one or more of the following causes…" The rules are too lax when the violation involves failing to follow guidelines when building/developing a well or testing its integrity. In those circumstances, the rules should require mandatory revocation of the permit. Rationale: Provisions in Section 1-70 of the Hydraulic Fracturing Regulatory Act (Well preparation, construction, and drilling) require adherence to the American Petroleum Institute (API) standards when developing and testing oil and gas wells. A strong case can be made that these are the most important sections in the law because their objective is to reduce the risks of well blowouts, fires and explosions along with the attendant risks of injury or death to workers, adverse public health outcomes to nearby residents, and the pollution of groundwater, air, and soil. There are reasons why failure to adhere to section I-70 must result in permit revocation: - If well operators shortcut the well development standards in Sec. 1-70 or if the well fails any of the required tests in Sec. 1-70, the adverse events cited above become much more likely. Pollution of aquifers is also much more likely and this pollution can be easily overlooked. - Other states have experienced major problems with some rogue companies that systematically and persistently engage in high-risk, cost-cutting violations of regulations, such as these. If some companies are allowed to violate Section 1-70, others will follow their lead. - It was the violation of the provisions in Sec. 1-70 that lead to the Deepwater Horizon explosion in the Gulf of Mexico on 20 April 2010. That explosion claimed 11 lives and led to the largest environmental disaster in American History. Automatic permit revocation for violations of Sec. 1-70 could prove to be one of the more effective ways to ensure higher levels of safety and environmental protection in areas where fracking will occur. If the IDNR is not serious about strict enforcement of Sections 245-520/580, then it has already nullified one of the most important set of regulatory standards for the oil and gas industry.

Sincerely, Rui Chicago, IL 60637

In reference to Subpart G: Chemical Disclosure; Trade Secrets

Section 245.720 Department Publication of Chemical Disclosures and Claims of Trade Secret

Section 245.720(d) of the Proposed Hydraulic Fracturing Regulatory Act administrative rules states: IDNR allows permit applicants to withhold chemical disclosure information under a claim of “trade secret” if they can establish that (1) the information has not been published, disseminated, or otherwise become a matter of general public knowledge, and (2) the information has competitive value. This offers carte blanche to "applicants" to conceal information about their activities at their own discretion while they are doing -- whatever it is they choose to do -- to the ground my family lives on and the water that we drink. It is unacceptable, and I am astonished, though perhaps I should not be these days, that it is proposed. If I were at dinner, and a stranger burst in and shook a vial of "something" (trade secret!) all over my food and threw it in my face, I would not regard it as irrelevant, or presumptuous of me to ask, what was in that vial. One does not perform one's regulatory responsibility by simply relegating anything meaningful that might be regulated outside one's mandate.

Sincerely, Katherine Kasserman Chicago, IL 60625

In reference to Subpart G: Chemical Disclosure; Trade Secrets

Section 245.720 Department Publication of Chemical Disclosures and Claims of Trade Secret

Section 245.720(d) of the Proposed Hydraulic Fracturing Regulatory Act administrative rules, states: IDNR allows permit applicants to withhold chemical disclosure information under a claim of "trade secret" if they can establish that (1) the information has not been published, disseminated, or otherwise become a matter of general public knowledge, and (2) the information has competitive value. Problems with this section: "Competitive value" is not defined in the various administrative code definitions. There is no IDNR administrative criteria provided which is the basis of "competitive value" other than, apparently, a self-identified one provided by the fracking operator. Why these are problems: Undefined and catch-all allowances for generic "competitive value" open the door for any and all dangerous chemicals to be undisclosed simply based on the operators desire to do so. Individual ingredients in the various chemical products used during hydraulic fracturing cannot be considered trade secrets under the criteria "competitive value". The regulations should be revised to state that information on file with IDNR must be disclosed to the public. Raising such an allowance for a fracking operator to not disclose potentially dangerous chemicals based on "competitive value" automatically gives them more power than the basic claim of the law which is to protect the environment of Illinois. Revisions Needed: "Competitive value" must be fully defined within the rulemaking. Competitive value must not in any way supersede a determination of the public right to know and the basic legislative and Illinois Constitutional provision of a healthy and safe environment for its citizens. Any conflict between "competitive value" and the public right to know must be decided on the inherent protection of the citizens and the environment. The US EPA EPCRA regulations at 40 CFR 350 subpart A provide valuable guidance for fleshing out the language of the Act, in ways that are entirely consistent with it. We recommend in particular that the Department review the detailed showing required in 40 CFR 350.7, and import those requirements here as appropriate.

Sincerely, Andrew Sigman Chicago, IL 60651

Section 245.720(d) of the Proposed Hydraulic Fracturing Regulatory Act administrative rules, states: IDNR allows permit applicants to withhold chemical disclosure information under a claim of "trade secret" if they can establish that (1) the information has not been published, disseminated, or otherwise become a matter of general public knowledge, and (2) the information has competitive value. Problems with this section: "Competitive value" is not defined in the various administrative code definitions. There is no IDNR administrative criteria provided which is the basis of "competitive value" other than, apparently, a self-identified one provided by the fracking operator. Why these are problems: Undefined and catch-all allowances for generic "competitive value" open the door for any and all dangerous chemicals to be undisclosed simply based on the operators desire to do so. Individual ingredients in the various chemical products used during hydraulic fracturing cannot be considered trade secrets under the criteria "competitive value". The regulations should be revised to state that information on file with IDNR must be disclosed to the public. Raising such an allowance for a fracking operator to not disclose potentially dangerous chemicals based on "competitive value" automatically gives them more power than the basic claim of the law which is to protect the environment of Illinois. Revisions Needed: "Competitive value" must be fully defined within the rulemaking. Competitive value must not in any way supersede a determination of the public right to know and the basic legislative and Illinois Constitutional provision of a healthy and safe environment for its citizens. Any conflict between "competitive value" and the public right to know must be decided on the inherent protection of the citizens and the environment. The US EPA EPCRA regulations at 40 CFR 350 subpart A provide valuable guidance for fleshing out the language of the Act, in ways that are entirely consistent with it. We recommend in particular that the Department review the detailed showing required in 40 CFR 350.7, and import those requirements here as appropriate.

Sincerely, Camil Machaj Lemont, IL 60439

In reference to Subpart G: Chemical Disclosure; Trade Secrets

Section 245.720 Department Publication of Chemical Disclosures and Claims of Trade Secret

Section 245.720(d) of the Proposed Hydraulic Fracturing Regulatory Act administrative rules, states: IDNR allows permit applicants to withhold chemical disclosure information under a claim of "trade secret" if they can establish that (1) the information has not been published, disseminated, or otherwise become a matter of general public knowledge, and (2) the information has competitive value. Problems with this section: "Competitive value" is not defined in the various administrative code definitions. There is no IDNR administrative criteria provided which is the basis of "competitive value" other than, apparently, a self-identified one provided by the fracking operator. Why these are problems: Undefined and catch-all allowances for generic "competitive value" open the door for any and all dangerous chemicals to be undisclosed simply based on the operators desire to do so. Individual ingredients in the various chemical products used during hydraulic fracturing cannot be considered trade secrets under the criteria "competitive value". The regulations should be revised to state that information on file with IDNR must be disclosed to the public. Raising such an allowance for a fracking operator to not disclose potentially dangerous chemicals based on "competitive value" automatically gives them more power than the basic claim of the law which is to protect the environment of Illinois. Revisions Needed: "Competitive value" must be fully defined within the rulemaking. Competitive value must not in any way supersede a determination of the public right to know and the basic legislative and Illinois Constitutional provision of a healthy and safe environment for its citizens. Any conflict between "competitive value" and the public right to know must be decided on the inherent protection of the citizens and the environment. The US EPA EPCRA regulations at 40 CFR 350 subpart A provide valuable guidance for fleshing out the language of the Act, in ways that are entirely consistent with it. We recommend in particular that the Department review the detailed showing required in 40 CFR 350.7, and import those requirements here as appropriate.

Sincerely, David Zask NY, IL 10128
